Summary

Aspiring Data Engineer with hands-on experience in SQL, Python, PySpark, Azure Databricks, and Azure Data Factory. Skilled in data migration, ETL pipeline development, and working with modern cloud-based data engineering tools.

Skills

Programming & Languages: SQL, Python, PySpark, SAS, Java (Data Structures and Algorithms)

Platforms & Tools: Databricks, Azure Data Factory (ADF), SQL Server Management Studio (SSMS), Visual Studio Code (VS Code)

Frameworks & Libraries: NumPy, Pandas, Matplotlib, Seaborn

Experience

Data-Engineer

April 2025 – Present

Data Ingestion and Transformation Pipeline on Azure

- Assisted in migrating data from on-premises SQL Server to Azure cloud storage using Databricks and Azure Data Factory.
- Developed and maintained ETL pipelines for ingesting structured and semi-structured data (CSV/JSON) from ADLS into Delta Tables.
- Worked on data cleaning, transformation, and validation using PySpark, Pandas, and SQL.

Projects

Azure End-to-End Data Engineering Project (Spotify Dataset)

November 2025 – January 2026

- Designed end-to-end data pipelines using Azure Data Factory for incremental and automated data ingestion from Azure SQL DB.
- Performed data transformations using PySpark in Azure Databricks, including streaming ingestion and Delta Lake optimization.
- Built analytical data models using Star Schema and Slowly Changing Dimensions (SCDs).

Modern Data Lakehouse Pipeline using Azure ADF, Databricks, and Delta Lake

April 2025 – August 2025

- Built end-to-end data engineering pipelines using Azure Data Factory for orchestration and Azure Databricks (PySpark) for data processing.
- Implemented Medallion Architecture (Bronze, Silver, Gold) and Unity Catalog for scalable data transformation, governance, and access control.
- Designed dimensional data models and implemented Slowly Changing Dimensions (SCD Type 2) for historical data management.

Zomato Data Analysis and Visualization

July 2025 – September 2025

- Collected, cleaned, and preprocessed the Zomato dataset using Python (Pandas, NumPy) for exploratory data analysis (EDA).
- Analyzed restaurant ratings, cuisines, cost trends, and customer preferences using Matplotlib and Seaborn for data visualization.
- Built interactive visualizations and dashboards to present actionable business insights and food industry trends.

Certifications

- Databricks Certified: Data Engineer Associate
- Microsoft Certified: Fabric Data Engineer Associate

Education

B.Tech in Computer Science and Engineering

Chitkara University, Himachal Pradesh

Graduation: 2025

CGPA: 8.2 / 10
